

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

had seven different official organs, and in addition to a great deal of miscellaneous matter has published detailed reports on the Thrushes, Owls and Sparrows. Two other reports are nearly ready and others will soon be begun. At present there are a hundred members in the Chapter, representing twenty-eight states and Canada.

What to Study.

The attention of every member is called to the following paragraph taken from a recent and well-known work on Ornithology:

"The present generation of working Ornithologists have been too busy in hunting up new species and in variety-making to study the habits of birds with equal care and diligence, and it is to Wilson and Audubon and Nuttall that we are chiefly indebted even at this day for what we know of bird-life. I must not, however, be understood as implying that no additions have been made to this branch of knowledge, nor as undervaluing the importance of recent observations. But the field is large; and in comparison with the work accomplished by the older writers, and with that which is still unknown, the recent acquisitions must be termed slight."

All this shows how much work of real

value there is yet to be done in this branch of Ornithology, and that, too, in the very field in which our chapter is working. How many new facts shall we find out and place on record this year?

Important.

The series of *Bulletins* to be issued is intended to keep members informed of the doings of the Chapter. Members are scarcely to be blamed if they lose interest in a society that they hear from only semi-occasionally.

This year we hope it will be otherwise; but how can we publish the news if you do not send it to us? The President and Secretary will always be glad to hear from members. When you take a rare set of eggs, or identify a new bird, or when you learn any fact in Ornithology, let us know about it.

Binghamton, N. Y., May, 1894.
